

Synergy Operating System

The Synergy tablet and Isotec's proprietary Windows based software are standard features with our Safety Entrances®. The mobile Touchscreen tablet and operating software are designed for Ethernet or wireless connectivity, eliminating the need for fixed operating stations. The vibrant 1080P touch screen can monitor multiple cameras without the need to change operating screens, and has a built-in microphone for two way communications with multiple IP intercoms. Synergy tablets come in two versions; the "Rugged Rover" or the "Vibrant Desktop".

Features:

- Wireless or Ethernet
- Intuitive Operator Touchscreen
- Configurable Windows Based Software
- Two-way Audio with Multiple Intercoms
- Multiple Hi Res IP Camera Views
- Built In or Remote Diagnostics Capable
- Emails & Text Messaging Capable
- Multiple Voice Prompts

Isotec's Safety Entrances® are one of the safest ways to provide access control of your facility's entrances; protecting the lives of your people, and those they serve.

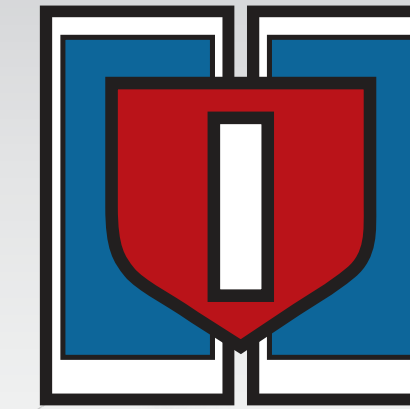

Isotec's customized designs and standard models feature isolation technologies that enable our Safety Entrances® to detect, and protect against the unique threats particular to your facility. Discussing your needs and objectives are the first steps toward designing a risk appropriate safety and security solution for your facility.

Isotec's Safety Entrances® are designated by the Department of Homeland Security as Qualified Anti-terrorism Technologies. We protect the most secure facilities on the planet, including federal & municipal buildings, military bases, airports, commercial, and industrial facilities.

We specialize in entrance assessments, site specific designs & engineering, and customized scenarios of operation. Our services include standardized installation supervision, operator training and 24/7 technical support services.

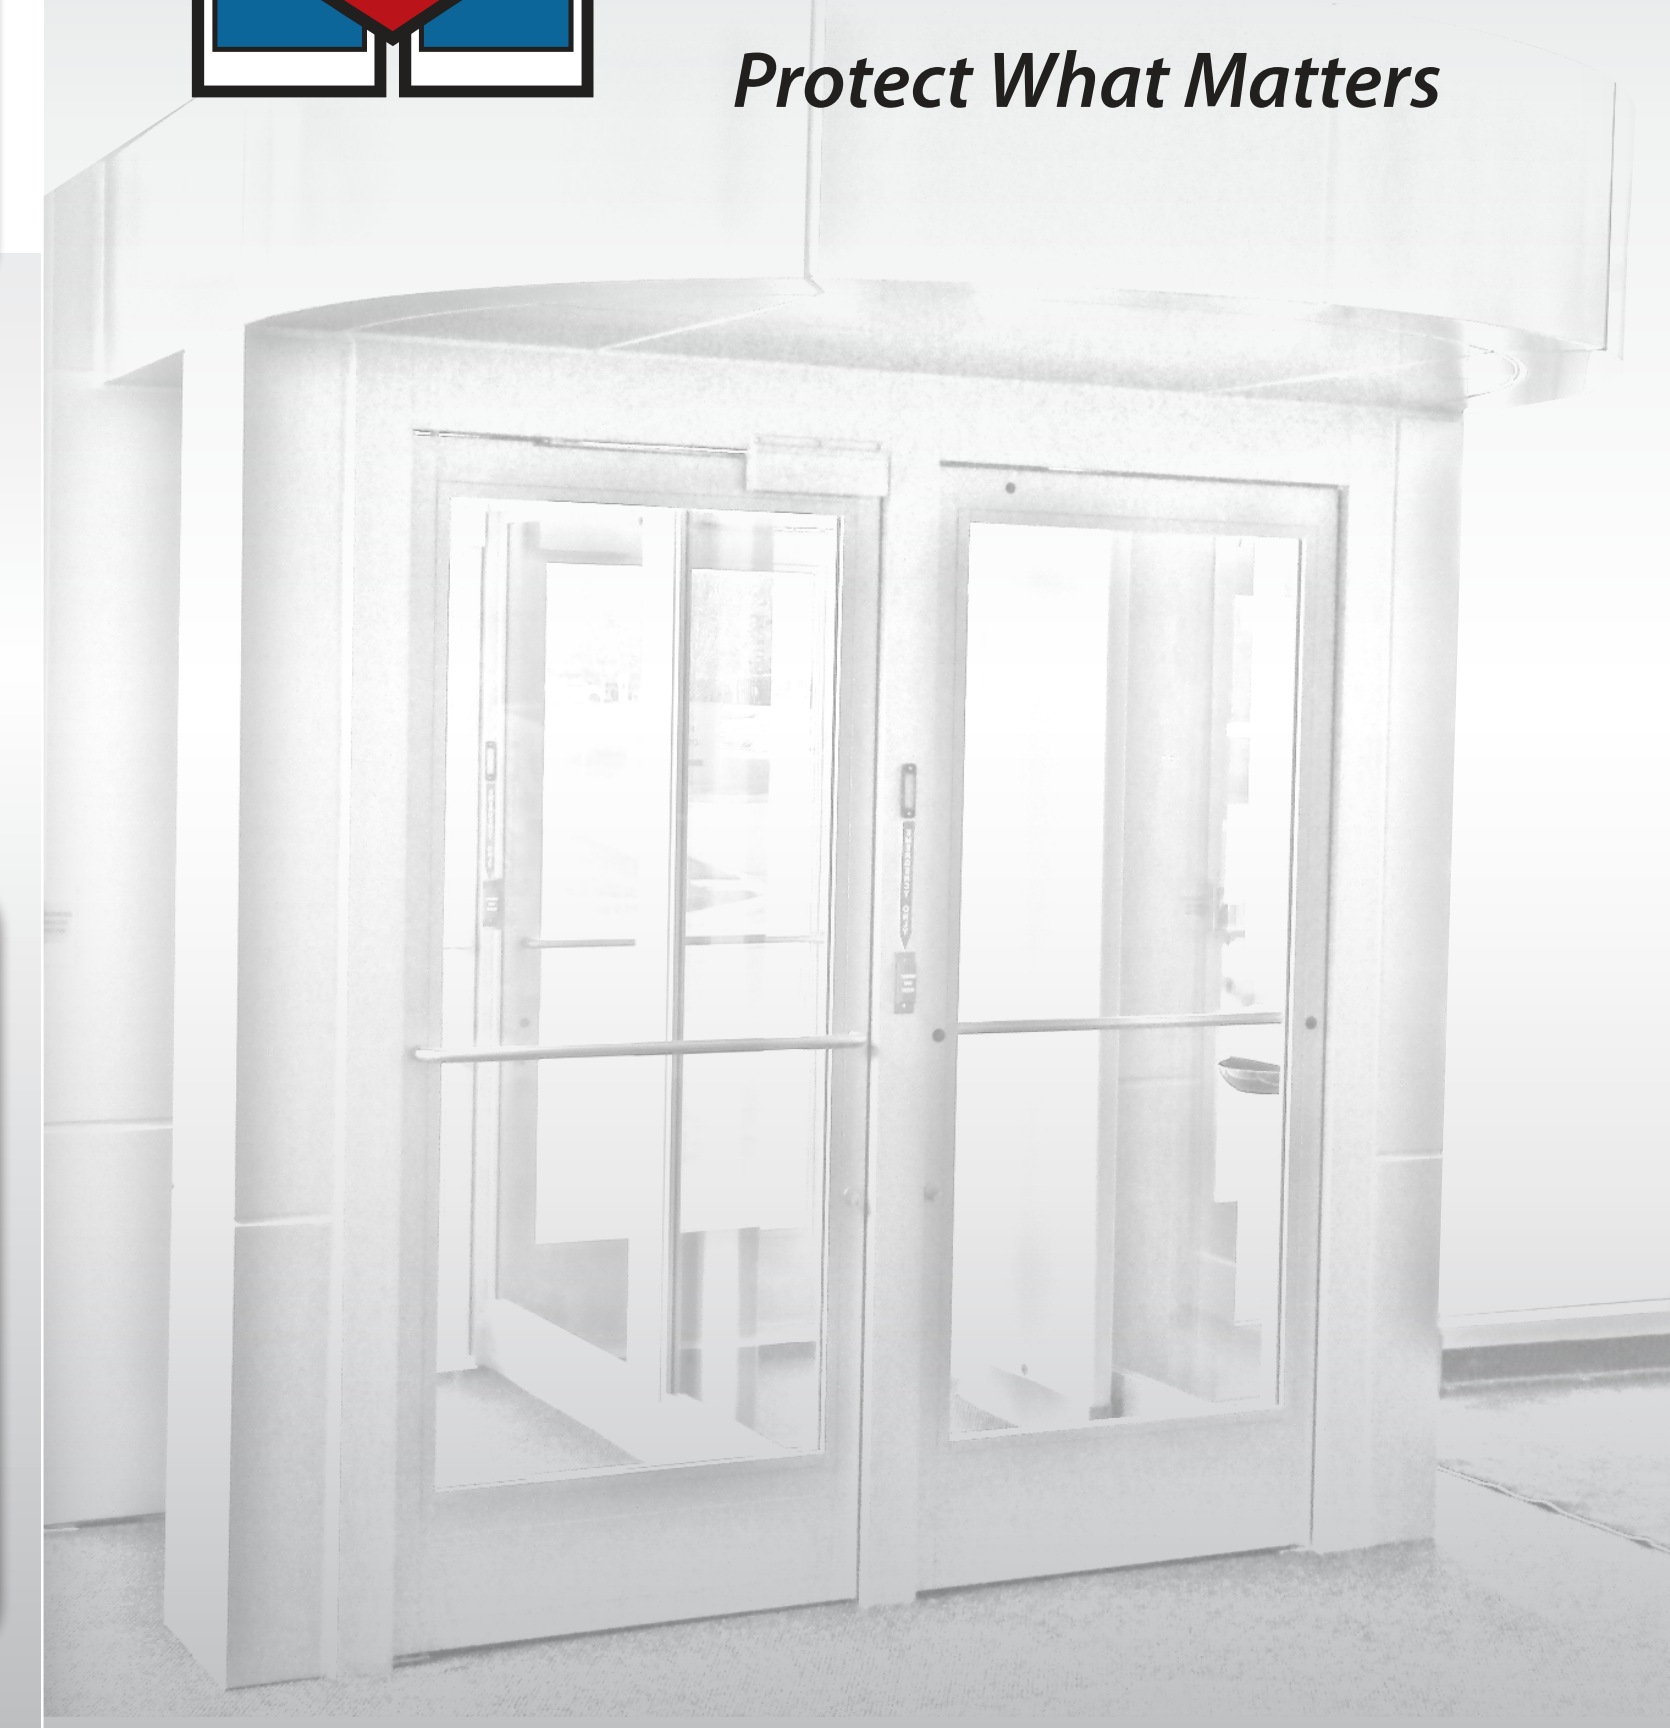

Isotec's Safety Entrances® are available through prime contractors, and our security integrator network. Both provide turnkey solutions, and onsite tech support services.
